What does the MARCIVE pilot profile set-up entail?

Bibliographic records will be provided based on a library's pilot profile, which uses GPO item numbers or other criteria. You can choose the following custom options:

* Changed or updated full GPO cataloging records;
* Historic Shelflist cataloging records;
* Libraries may choose how the record sets are organized. For example, they can be separated by format (e.g. serials only, microfiche only, EL only, etc.), or they may be one file;
* Creation of item record holding fields (if desired);
* Creation of holding codes based on format (if desired);
* Placement of OCLC and SuDoc numbers and designated MARC fields according to local practice; and
* Record sets in MARC 8 or UTF-8.

More information is available in the pilot profile application form and accompanying guide.
